Continuous learning pipeline for DOT

Dot pipeline for AI-based optimization

LATYS

Data collection

We build a data collection layer that receives, reads, or extracts information from DOT application and converts it into a consistent format.

- Prometheus

LATYS

Prometheus - Monitoring system & time series database

Data validation and storage

We need to validate our data and make sure data quality rules, helping detect invalid value, unexpected data types, and structural inconsistencies before they cause problems

pandera documentation

LATYS

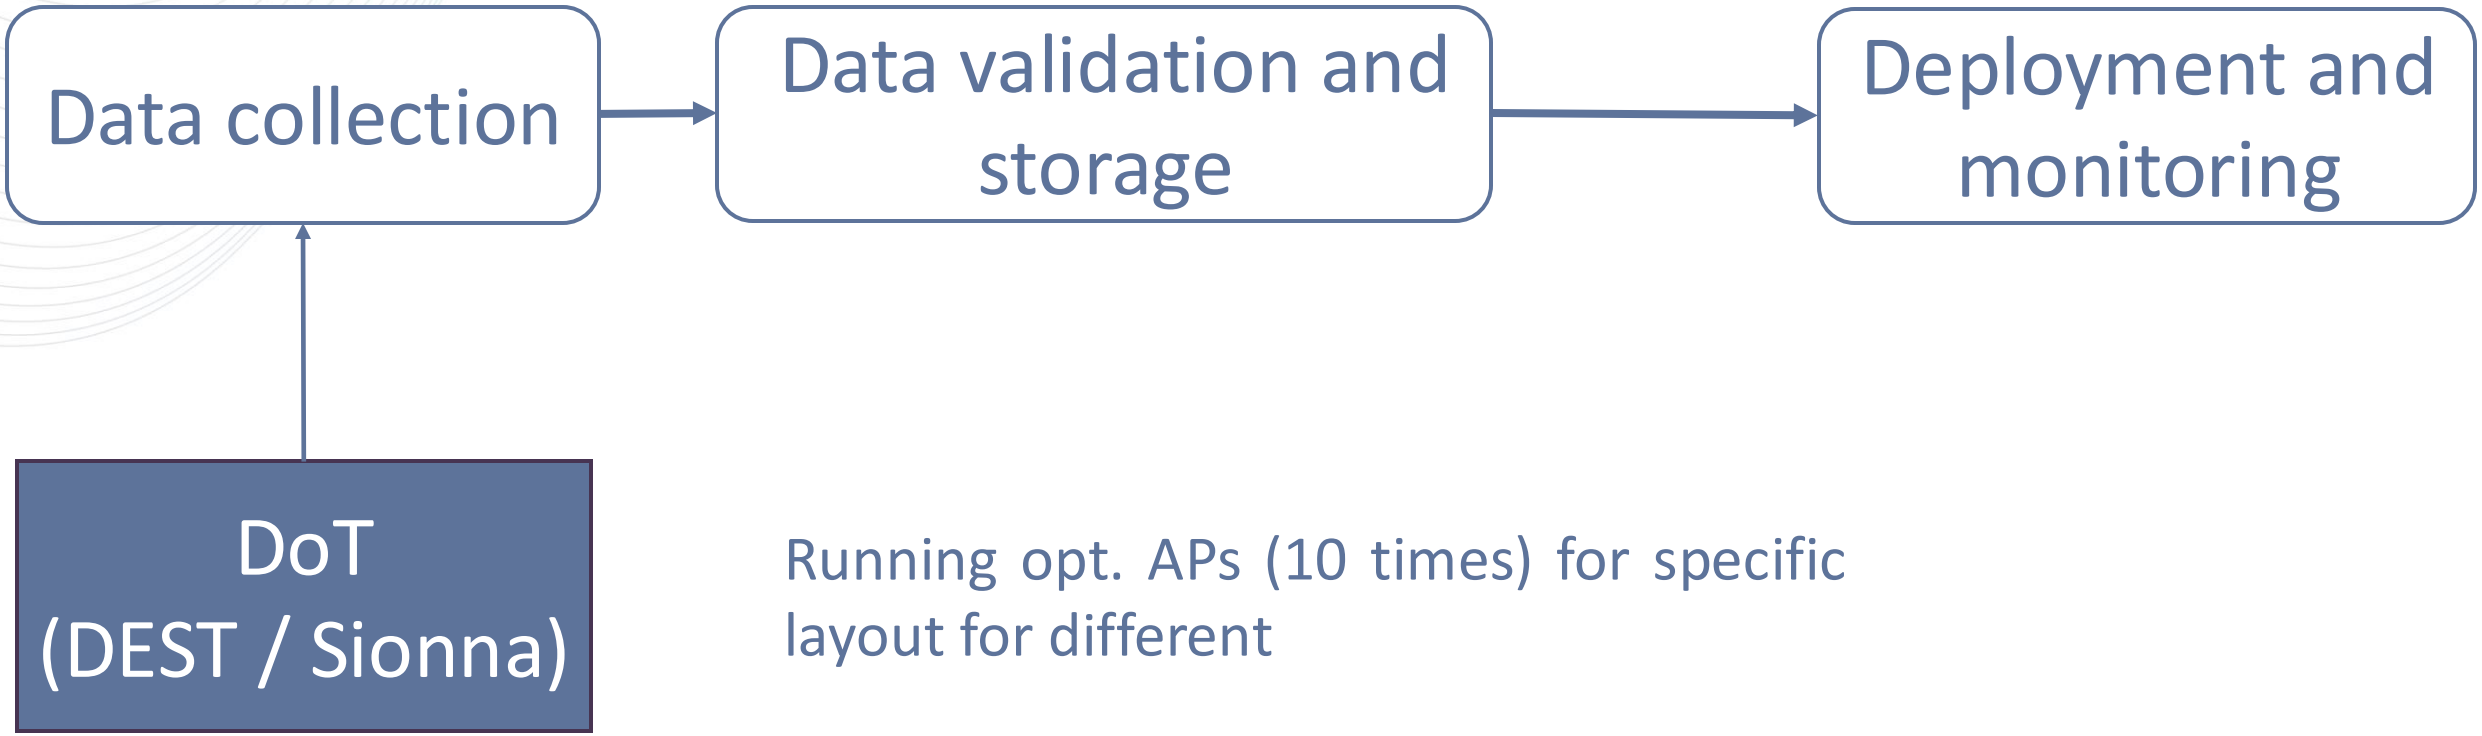

Deployment and monitoring

We need to design our own Grafana dashboard for your data, including data generated by our Dot Tool

LATYS

First Task for pipeline

Running opt. APs (10 times) for specific layout for different
