Layer-0 Wireless™

Programmable RF propagation

Intro

OUR STORY

Today's networks stop at Layer 1 – the Physical layer.

LATYS extends networking below the physical environment into the medium itself.

Layer-0 Wireless makes radio propagation programmable.

LATYS shapes existing RF signals to improve coverage and usable capacity while reducing infrastructure needs and preserving latency performance.

LATYS

PROBLEM WE SOLVE:
RF PERFORMANCE AT THE NETWORK EDGE

Today's wireless networks were designed for people.

Tomorrow's networks must support autonomous machines.

Machines cannot tolerate:

- Latency / Jitter
- Interference
- Reduced Availability / Reliability
- Load management uncertainty

Future applications require better connectivity without adding network cost, complexity and latency.

LATYS

SOLUTION: LATYS LAYER-0 WIRELESS™

- LATYS' enabling tech is the **smart Reconfigurable Intelligent Surface** (Smart RIS) for shaping and extending existing RF signals under network control.
- LATYS' Layer-0 Wireless™ yields network performance improvements in availability, signal fidelity, and TCO.
- Protocol agnostic across Wi-Fi, 5/6G, microwave and millimeter wave.
- Lower latency and higher reliability are mission critical in 5G/6G and Edge AI use cases.

WHY LATYS WINS

- Our Technology is PROVEN:
  - Ultra-low latency (ULL) 0uS injection by LATYS
  - Software-configured metasurface beamformer enhances wireless performance
  - Protocol and environment agnostic
    - Adaptable to 2-90GHz and demonstrated in harshest of environments

- 6G and Edge AI use cases require each of these capabilities
  - Without ULL and signal integrity physical AI edge inference will not work, and in some cases can be dangerous.
  - LATYS becomes a requirement, not a nice to have

- Our application space is nearly unlimited:
  - We are NOT an antenna.
  - We are a new approach to wireless network design for any wireless network protocol and frequency.

We are the first-ever solution for bringing the medium itself (Layer-0) into the wireless network, enabling high-availability, zero-latency, and network load-balancing in the physical layer.

The market needs this now.

LATYS

LATYS + CANADIAN ROYALTIES INC.

PROOF OF SUCCESS - WAREHOUSE

BEFORE

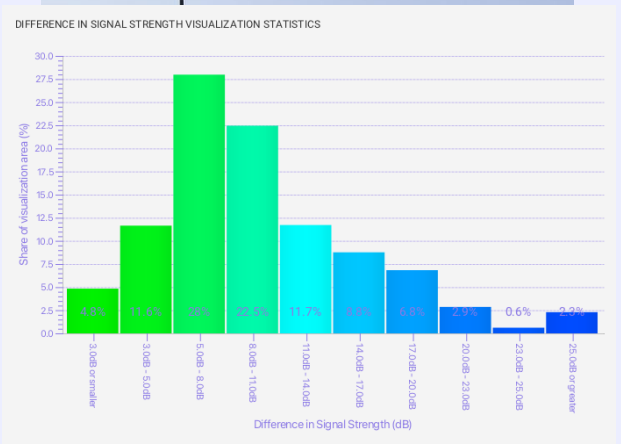

AFTER

Almost half of the facility without effective coverage

Significant coverage improvement everywhere without adding APs / base stations

Results

LATYS

LATYS + CANADIAN ROYALTIES INC.

PROOF OF SUCCESS - UNDERGROUND MINE

BEFORE

No wireless coverage in mine work areas

AFTER

Equipment at rock face can be connected / automated without more APs / cabling

Results (Customer Impact)

- 100% coverage of target area
- Remote drilling enabled
- No on-site IT required

Results (Business Impact)

- Targeted coverage where its needed
- Adaptive deployment with mine
- Purchase order

LATYS

COMPETITIVE ADVANTAGE

- LATYS Creates **new Layer-0 Wireless™** capability - powered by proven, **patent protected metamaterial** and networking architecture.
- Passive RF architecture injects **0ms of latency/jitter** and increases availability
- **Ubiquitous spectrum/protocol** performance enables multiple GTM opportunities.
- **Successfully deployed**, and have validation from major SI partner
- Massive new potential use cases in V2X and robotics with LATYS Skin (see next slide)

EXAMPLE NEW USE CASE: LATYS SKIN™

RF skin for drones

How it works

LATYS FOCUS SKIN
on the drone

WIRELESS LINK
(SG/Wi-Fi 6/mmWave)

LATYS CLOUD AI
Data Processing, Model Update, Fleet Management

OPERATOR INTERFACE
Real-time video, telemetry, alerts & control

A smart skin that transforms any drone frame into an intelligent, connected, and autonomous platform. It integrates wireless communication seamlessly into the drone's body.

LATYS

GTM STRATEGY

- Engage with Mobile Network Operators (MNOs)
  - Target Vodafone, DT, Orange, Verizon, AT&T, TELUS, etc.
  - Establish technology trials to validate SmartRIS performance in live network scenarios
  - Deploy Layer-0 Wireless™ in new spectrum buildouts
- Partner with:
  - System Integrators for next gen network buildouts
  - RF and Subsystem businesses (Kymeta, Amphenol, CommScope, Murata Manufacturing, and others)
- Co-sell / direct sales into infrastructure opportunities:
  - Mining, logistics, universities, enterprises
  - Industrial automation and robotics (Siemens, Rockwell Automation, ABB, and more)
- Engage property management / real estate vertical
  - Employ Layer-0 Wireless™ as part of the building envelope to enhance in-building connectivity with less infrastructure

LATYS

SUMMARY

- We are 1st to market, where others have tried and failed!
- Our technology is proven to work
- We have partners actively evaluating and integrating LATYS into their ecosystem.
- We are actively pursuing multiple vectors for growth, capital, and net new customers.

THANK YOU!
